Merczoite surface antigen - malaria parasite (Plasmodium falciparum)
C,Species: Plasmodium falciparum
C,Species: S3310
R,Ramasamy, R.; Ranasinghe, C.
submitted to the BMBL Bata Library, November 1993
A,Description: Cycle ds DNA sequencing of a malaria parasite protein from infected blood
A,Reference number: S39310
A,Reference number: S39310
A,Status: preliminary
A,Status: preliminary
A,Molecule type: DNA
A,Residues: 1-278 *RAM>
A,Residues: 1-278 *RAM>
A,Residues: 1-278 *RAM>
A,Residues: UNIPROT:Q25862; EMBL:X76087; NID:g434996; PID:g836639
C,Superfamily: Epstein-Barr virus nuclear antigen
C,Superfamily: Epstein-Barr virus nuclear antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             merozoite surface antigen 2 - malaria parasite (Plasmodium falciparum)
C.Species: Plasmodium falciparum
C.Date: 22-Apr-1993 #sequence_revision 18-Nov-1994 #text_change 09-Jul-2004
C.Accession: A45632
A.Fitle: Two novel alleles within subfamilies of the merozoite surface antigen 2 (MSA-2)
A.Riachen: R1916

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hypothetical protein 2C13.3 - Caenorhabditis elegans
Cispecies: Caenorhabditis elegans
Cispecies: Caenorhabditis elegans
Cispecies: Caenorhabditis elegans
Cispacies: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 09-Jul-2004
Ciscession: T25937
Ribradshaw, H.
Submitted to the EMBL Data Library, August 1996
A.Poscription: The sequence of C. elegans cosmid ZC13.
A.Reference number: Z20113
A.Reference number: Z20113
A.Reference number: J2937
A.Residues: preliminary; translated from GB/EMBL/DDBJ
A.Molecule type: DNA
A.Residues: 1-732 - GRA>
